To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0528 Lincoln County H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1221 Lincoln K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1221 Lincoln K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	16	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1221 Lincoln K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	52	52	1 (100%)	0.93122	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	52	21	0.4 (40%)	0.22518	0.61224	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1221 Lincoln K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1221 Lincoln K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	34	7	0.21 (21%)	0.04777	0.57237	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	34	1	0.03 (3%)	0.00013	0.8054	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	34	1	0.03 (3%)	0.00013	0.8054	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1221 Lincoln K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1221 Lincoln K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0216 Lindsay Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0216 Lindsay Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0216 Lindsay Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0216 Lindsay Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0216 Lindsay Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0216 Lindsay Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0216 Lindsay Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0612 Livingston Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0612 Livingston Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0612 Livingston Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	166	164	0.99 (99%)	0.95686	0.99672	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	166	54	0.33 (33%)	0.21561	0.45819	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0612 Livingston Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

District Name 0612 Livingston Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	111	68	0.61 (61%)	0.49378	0.7194	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	111	10	0.09 (9%)	0.01489	0.39275	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	111	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0612 Livingston Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	16	3	0.19 (19%)	0.02183	0.70404	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0612 Livingston Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0967 Lockwood Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0967 Lockwood Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0967 Lockwood Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	248	236	0.95 (95%)	0.91628	0.97249	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	248	103	0.42 (42%)	0.32487	0.51186	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0967 Lockwood Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0967 Lockwood Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	162	49	0.3 (30%)	0.19214	0.4415	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	162	11	0.07 (7%)	0.00973	0.34968	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	162	9	0.06 (6%)	0.00579	0.37115	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0967 Lockwood Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	25	2	0.08 (8%)	0.00301	0.70931	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0025 Lodge Grass Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0025 Lodge Grass Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0025 Lodge Grass Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	66	41	0.62 (62%)	0.46847	0.7532	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0025 Lodge Grass Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0025 Lodge Grass Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	42	31	0.74 (74%)	0.56351	0.86019	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	42	2	0.05 (5%)	0.00105	0.68909	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	42	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0025 Lodge Grass Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0025 Lodge Grass Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1190 Lodge Grass H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	10	6	0.6 (60%)	0.25239	0.86955	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1190 Lodge Grass H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	37	3	0.08 (8%)	0.00452	0.628	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1190 Lodge Grass H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	16	12	0.75 (75%)	0.4677	0.91109	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1190 Lodge Grass H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1190 Lodge Grass H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	37	18	0.49 (49%)	0.27922	0.69849	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	37	2	0.05 (5%)	0.00137	0.69318	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	37	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1190 Lodge Grass H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1190 Lodge Grass H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0588 Lolo Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0588 Lolo Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0588 Lolo Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	120	120	1 (100%)	0.96899	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	120	57	0.48 (48%)	0.35108	0.60207	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	77	2	0.03 (3%)	0.00027	0.67505	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	77	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0588 Lolo Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	14	11	0.79 (79%)	0.4903	0.93326	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0588 Lolo Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0741 Lone Rock Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0741 Lone Rock Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0741 Lone Rock Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	48	46	0.96 (96%)	0.85725	0.98879	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	48	11	0.23 (23%)	0.07421	0.52429	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0741 Lone Rock Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0741 Lone Rock Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	32	25	0.78 (78%)	0.58834	0.89926	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	32	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	32	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0741 Lone Rock Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	10	8	0.8 (80%)	0.45494	0.95046	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0741 Lone Rock Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0941 Lustre Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0941 Lustre Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0941 Lustre Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0941 Lustre Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0941 Lustre Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0941 Lustre Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1231 Luther Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1231 Luther Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1231 Luther Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1231 Luther Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0370 Malmborg Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0370 Malmborg Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0370 Malmborg Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0370 Malmborg Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0370 Malmborg Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0370 Malmborg Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0659 Malta K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0659 Malta K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	34	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0659 Malta K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	72	72	1 (100%)	0.94936	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	72	18	0.25 (25%)	0.1071	0.48081	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0659 Malta K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0659 Malta K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	82	21	0.26 (26%)	0.11805	0.46954	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	82	11	0.13 (13%)	0.03124	0.42638	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	82	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0659 Malta K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	15	4	0.27 (27%)	0.05096	0.71093	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0659 Malta K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0347 Manhattan Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0347 Manhattan Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0347 Manhattan Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	24	22	0.92 (92%)	0.73149	0.978	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0347 Manhattan Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0347 Manhattan Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0348 Manhattan H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0348 Manhattan H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	16	1	0.06 (6%)	0.0009	0.81831	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0348 Manhattan H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0348 Manhattan H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0348 Manhattan H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	16	4	0.25 (25%)	0.04553	0.69936	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	16	7	0.44 (44%)	0.16349	0.75578	0.12 (12%)	Not Met
Indicator 5C	Education Environment Rate -- Sep Schls	16	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0348 Manhattan H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0341 Marion Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	22	26	1 (100%)	0.8713	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	22	12	0.55 (55%)	0.28897	0.7799	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0341 Marion Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0341 Marion Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	13	12	0.92 (92%)	0.65394	0.98707	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	13	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	13	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0341 Marion Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0341 Marion Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0530 McCormick Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0530 McCormick Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0530 McCormick Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0530 McCormick Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0530 McCormick Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0530 McCormick Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0530 McCormick Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0875 McLeod Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0875 McLeod Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

District Name

0875 McLeod Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0875 McLeod Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0822 Medicine Lake K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0822 Medicine Lake K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0822 Medicine Lake K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	22	22	1 (100%)	0.85138	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	22	16	0.73 (73%)	0.48243	0.88414	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0822 Medicine Lake K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0822 Medicine Lake K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	19	19	1 (100%)	0.83185	1.00001	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	19	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	19	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0822 Medicine Lake K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

District Name 0822 Medicine Lake K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0844 Melrose Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0844 Melrose Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0844 Melrose Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0844 Melrose Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0844 Melrose Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0844 Melrose Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0607 Melstone Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0607 Melstone Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0607 Melstone Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	10	1 (100%)	0.72251	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0607 Melstone Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0607 Melstone Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0607 Melstone Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0608 Melstone H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0608 Melstone H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0608 Melstone H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0608 Melstone H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0608 Melstone H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0608 Melstone H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0608 Melstone H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0868 Melville Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0868 Melville Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0868 Melville Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

0868 Melville Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0868 Melville Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0868 Melville Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0684 Miami Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0684 Miami Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0684 Miami Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0684 Miami Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0172 Miles City Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0172 Miles City Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0172 Miles City Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	212	208	0.98 (98%)	0.95212	0.9927	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	212	80	0.38 (38%)	0.27906	0.48689	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0172 Miles City Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0172 Miles City Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	155	103	0.66 (66%)	0.56887	0.74833	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	155	29	0.19 (19%)	0.08537	0.36199	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	155	1	0.01 (1%)	-0.00007	0.79612	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0172 Miles City Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	24	14	0.58 (58%)	0.33591	0.79487	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0583 Missoula Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0583 Missoula Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	1110	1088	0.98 (98%)	0.97005	0.98693	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	1110	423	0.38 (38%)	0.33607	0.42824	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0583 Missoula Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0583 Missoula Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	705	359	0.51 (51%)	0.45768	0.56056	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	705	102	0.14 (14%)	0.08932	0.22582	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	705	2	0 (0%)	-0.00006	0.65954	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0583 Missoula Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	110	60	0.55 (55%)	0.42054	0.66489	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0583 Missoula Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0584 Missoula H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	114	78	0.68 (68%)	0.57448	0.77664	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0584 Missoula H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	599	46	0.08 (8%)	0.0286	0.19019	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0584 Missoula H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	250	250	1 (100%)	0.98487	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	250	79	0.32 (32%)	0.22405	0.42501	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0584 Missoula H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0584 Missoula H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	599	201	0.34 (34%)	0.2739	0.40337	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	599	122	0.2 (20%)	0.14177	0.28365	0.12 (12%)	Not Met
Indicator 5C	Education Environment Rate -- Sep Schls	599	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0584 Missoula H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0584 Missoula H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0852 Molt Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0852 Molt Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0852 Molt Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0852 Molt Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0852 Molt Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0363 Monforton Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0363 Monforton Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0363 Monforton Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	44	32	0.73 (73%)	0.55509	0.85075	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	44	16	0.36 (36%)	0.17671	0.60335	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0363 Monforton Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0363 Monforton Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	27	23	0.85 (85%)	0.65799	0.94503	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	27	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	27	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0363 Monforton Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9258 Mont Sch for Deaf Blind

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9258 Mont Sch for Deaf Blind

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	40	1	0.02 (2%)	0.00007	0.80364	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9258 Mont Sch for Deaf Blind

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

9258 Mont Sch for Deaf Blind

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	60	0	0 (0%)	0	0	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	60	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	60	57	0.95 (95%)	0.8599	0.98329	0.018 (1.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9258 Mont Sch for Deaf Blind

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 9258 Mont Sch for Deaf Blind

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0460 Montana City Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0460 Montana City Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	52	44	0.85 (85%)	0.71242	0.92432	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	52	14	0.27 (27%)	0.10716	0.53065	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0460 Montana City Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	37	35	0.95 (95%)	0.81817	0.98553	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	37	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	37	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0460 Montana City Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0460 Montana City Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0273 Moore Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0273 Moore Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0273 Moore Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0273 Moore Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0273 Moore Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0273 Moore Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0273 Moore Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0274 Moore H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

0274 Moore H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0274 Moore H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0274 Moore H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

For School Year: 2005-2006

District Name

0274 Moore H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0274 Moore H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0274 Moore H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0976 Morin Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0976 Morin Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0976 Morin Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0976 Morin Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0976 Morin Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0976 Morin Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1222 Mountain View Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1222 Mountain View Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1222 Mountain View Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1222 Mountain View Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0937 Nashua K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0937 Nashua K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	20	16	0.8 (80%)	0.55659	0.92728	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0937 Nashua K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0937 Nashua K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	20	15	0.75 (75%)	0.49698	0.9011	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	20	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	20	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0937 Nashua K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0937 Nashua K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1216 North Harlem Colony Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1216 North Harlem Colony Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1216 North Harlem Colony Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1216 North Harlem Colony Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1216 North Harlem Colony Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1216 North Harlem Colony Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1233 North Star Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1233 North Star Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1233 North Star Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	26	18	0.69 (69%)	0.46199	0.855	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1233 North Star Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	15	6	0.4 (40%)	0.13044	0.7476	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1233 North Star Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1233 North Star Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1234 North Star HS

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1234 North Star HS

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1234 North Star HS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1234 North Star HS

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1234 North Star HS

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1234 North Star HS

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1234 North Star HS

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0811 Noxon Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0811 Noxon Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0811 Noxon Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0811 Noxon Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0811 Noxon Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0811 Noxon Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0811 Noxon Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0812 Noxon H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0812 Noxon H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0812 Noxon H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0812 Noxon H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0857 Nye Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0857 Nye Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0857 Nye Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0857 Nye Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0342 Olney-Bissell Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0342 Olney-Bissell Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	10	0.83 (83%)	0.5238	0.95789	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0342 Olney-Bissell Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0342 Olney-Bissell Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0342 Olney-Bissell Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0342 Olney-Bissell Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0935 Opheim K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0935 Opheim K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0935 Opheim K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0935 Opheim K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0935 Opheim K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0935 Opheim K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0375 Ophir Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0375 Ophir Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0375 Ophir Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0375 Ophir Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0375 Ophir Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0375 Ophir Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0715 Ovando Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

0715 Ovando Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0715 Ovando Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

0715 Ovando Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0715 Ovando Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0715 Ovando Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0808 Paradise Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0808 Paradise Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0808 Paradise Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0808 Paradise Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0846 Park City Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0846 Park City Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0846 Park City Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	32	32	1 (100%)	0.89285	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0846 Park City Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0846 Park City Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	28	25	0.89 (89%)	0.71613	0.96496	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	28	2	0.07 (7%)	0.0024	0.70404	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	28	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0846 Park City Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0847 Park City H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0847 Park City H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0847 Park City H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0847 Park City H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0847 Park City H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0847 Park City H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0847 Park City H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0613 Park H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	18	13	0.72 (72%)	0.45169	0.89139	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0613 Park H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	72	13	0.18 (18%)	0.05576	0.45103	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0613 Park H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	38	36	0.95 (95%)	0.82259	0.98591	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	38	10	0.26 (26%)	0.08774	0.57	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

0613 Park H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0613 Park H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	72	53	0.74 (74%)	0.60447	0.83584	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	72	5	0.07 (7%)	0.00532	0.50762	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	72	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0613 Park H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0613 Park H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0362 Pass Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0362 Pass Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0362 Pass Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0362 Pass Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0362 Pass Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0362 Pass Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0196 Peerless K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0196 Peerless K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0196 Peerless K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0196 Peerless K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0196 Peerless K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0196 Peerless K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0196 Peerless K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0898 Pendroy Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0898 Pendroy Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0898 Pendroy Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0898 Pendroy Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0898 Pendroy Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0898 Pendroy Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0898 Pendroy Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0416 Philipsburg K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0416 Philipsburg K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	15	1	0.07 (7%)	0.00103	0.8199	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0416 Philipsburg K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	42	36	0.86 (86%)	0.70873	0.9367	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	42	17	0.4 (40%)	0.21084	0.63378	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0416 Philipsburg K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	34	2	0.06 (6%)	0.00162	0.69619	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	34	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0416 Philipsburg K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0416 Philipsburg K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0620 Pine Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0620 Pine Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0620 Pine Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0620 Pine Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0620 Pine Creek Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0620 Pine Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0385 Pine Grove Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0385 Pine Grove Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0385 Pine Grove Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0385 Pine Grove Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0385 Pine Grove Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0385 Pine Grove Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0987 Pioneer Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0987 Pioneer Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0987 Pioneer Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0987 Pioneer Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0802 Plains Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0802 Plains Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0802 Plains Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	40	54	1 (100%)	0.9336	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	40	12	0.3 (30%)	0.11766	0.57931	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0802 Plains Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0802 Plains Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	31	20	0.65 (65%)	0.42829	0.81526	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	31	4	0.13 (13%)	0.01392	0.60753	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	31	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0802 Plains Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0802 Plains Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0803 Plains H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0803 Plains H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	13	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0803 Plains H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0803 Plains H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0803 Plains H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	13	10	0.77 (77%)	0.46031	0.92874	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	13	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	13	1	0.08 (8%)	0.00139	0.82377	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0803 Plains H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0803 Plains H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0325 Pleasant Valley Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0325 Pleasant Valley Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

0325 Pleasant Valley Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0325 Pleasant Valley Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0325 Pleasant Valley Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0325 Pleasant Valley Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0325 Pleasant Valley Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1214 Plenty Coups H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1214 Plenty Coups H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	15	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1214 Plenty Coups H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1214 Plenty Coups H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	15	0	0 (0%)	0	0	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	2	0.13 (13%)	0.00814	0.74071	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1214 Plenty Coups H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1214 Plenty Coups H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0828 Plentywood K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0828 Plentywood K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	30	1	0.03 (3%)	0.0002	0.80696	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0828 Plentywood K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	64	66	1 (100%)	0.94501	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	64	27	0.42 (42%)	0.25703	0.60618	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0828 Plentywood K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0828 Plentywood K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	69	44	0.64 (64%)	0.48997	0.76328	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	69	3	0.04 (4%)	0.00132	0.59821	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	69	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0828 Plentywood K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0828 Plentywood K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0256 Plevna K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0256 Plevna K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0256 Plevna K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0256 Plevna K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0256 Plevna K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0256 Plevna K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0256 Plevna K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0012 Polaris Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0012 Polaris Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0012 Polaris Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0012 Polaris Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0012 Polaris Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0012 Polaris Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0477 Polson Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0477 Polson Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0477 Polson Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	110	130	1 (100%)	0.97131	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	110	47	0.43 (43%)	0.29667	0.56886	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0477 Polson Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0477 Polson Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	108	93	0.86 (86%)	0.77643	0.91714	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	108	4	0.04 (4%)	0.00127	0.52631	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	108	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0477 Polson Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	27	8	0.3 (30%)	0.094	0.63072	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0478 Polson H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	19	14	0.74 (74%)	0.47525	0.89646	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0478 Polson H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	57	5	0.09 (9%)	0.00823	0.52538	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0478 Polson H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	34	34	1 (100%)	0.89851	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0478 Polson H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0478 Polson H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	57	42	0.74 (74%)	0.58799	0.84601	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	57	4	0.07 (7%)	0.00445	0.55694	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	57	1	0.02 (2%)	0	0.80064	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0478 Polson H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0478 Polson H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0775 Poplar Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

For School Year: 2005-2006

District Name

0775 Poplar Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	17	4	0.24 (24%)	0.04093	0.68895	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	142	131	0.92 (92%)	0.8638	0.9572	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	142	29	0.2 (20%)	0.09666	0.38096	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0775 Poplar Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0775 Poplar Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0776 Poplar H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0776 Poplar H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	32	6	0.19 (19%)	0.03677	0.58213	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0776 Poplar H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	12	1 (100%)	0.75755	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0776 Poplar H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0776 Poplar H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	32	10	0.31 (31%)	0.11483	0.6142	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	32	10	0.31 (31%)	0.11483	0.6142	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	32	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0776 Poplar H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

District Name 0589 Potomac Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0589 Potomac Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0589 Potomac Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	32	28	0.88 (88%)	0.70631	0.95324	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0589 Potomac Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0589 Potomac Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	15	1	0.07 (7%)	0.00103	0.8199	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0589 Potomac Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0589 Potomac Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0706 Powder River Co Dist H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0706 Powder River Co Dist H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	16	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0706 Powder River Co Dist H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	10	1 (100%)	0.72251	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0706 Powder River Co Dist H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

District Name

0706 Powder River Co Dist H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	16	12	0.75 (75%)	0.4677	0.91108	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	16	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	16	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0706 Powder River Co Dist H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0706 Powder River Co Dist H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0713 Powell County H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0713 Powell County H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	63	2	0.03 (3%)	0.00043	0.67884	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0713 Powell County H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	36	12	0.33 (33%)	0.13809	0.60938	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0713 Powell County H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	63	7	0.11 (11%)	0.01651	0.48122	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	63	9	0.14 (14%)	0.03046	0.46886	0.018 (1.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0713 Powell County H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0713 Powell County H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0894 Power Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0894 Power Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0894 Power Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0894 Power Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0894 Power Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0894 Power Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0895 Power H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

For School Year: 2005-2006

District Name

0895 Power H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0895 Power H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0895 Power H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0895 Power H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0895 Power H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0021 Pryor Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0021 Pryor Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0021 Pryor Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	10	0.83 (83%)	0.5238	0.95789	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0021 Pryor Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0021 Pryor Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0021 Pryor Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0842 Ramsay Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0842 Ramsay Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0842 Ramsay Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	36	34	0.94 (94%)	0.81354	0.98514	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0842 Ramsay Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0842 Ramsay Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	20	1	0.05 (5%)	0.00055	0.81349	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	20	1	0.05 (5%)	0.00055	0.81349	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	20	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0842 Ramsay Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0842 Ramsay Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0858 Rapelje Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0858 Rapelje Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0858 Rapelje Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0858 Rapelje Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0858 Rapelje Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0858 Rapelje Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0858 Rapelje Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0859 Rapelje H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0859 Rapelje H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0859 Rapelje H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0859 Rapelje H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0859 Rapelje H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0754 Rau Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0754 Rau Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	10	0.83 (83%)	0.5238	0.95789	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0754 Rau Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	11	9	0.82 (82%)	0.49158	0.95446	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	11	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	11	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

0754 Rau Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0056 Red Lodge Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0056 Red Lodge Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0056 Red Lodge Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	58	60	1 (100%)	0.93984	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	58	30	0.52 (52%)	0.34691	0.68366	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0056 Red Lodge Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0056 Red Lodge Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	49	32	0.65 (65%)	0.47996	0.79336	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	49	2	0.04 (4%)	0.00076	0.68472	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	49	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0056 Red Lodge Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0056 Red Lodge Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0057 Red Lodge H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0057 Red Lodge H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	16	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.
